PROFESSIONAL SUMMARY

Results-driven Software Engineer specializing in the design and deployment of highly scalable, distributed web applications. Proven expertise in orchestrating robust backend systems with Python and FastAPI, seamlessly integrated with dynamic, type-safe React frontend architectures. Strong foundation in containerization, relational database design, and data processing. Adept at bridging the gap between complex technical requirements and intuitive user experiences, consistently delivering optimized, maintainable code in agile environments.

TECHNICAL SKILLS

- **Languages:** TypeScript, Python, JavaScript (ES6+), SQL, Java, C, HTML5/CSS3
- **Frontend Architecture:** React.js, Single Page Applications (SPAs), Responsive UI/UX
- **Backend & API Design:** FastAPI, Node.js, RESTful Architecture, Asynchronous Programming
- **Databases:** PostgreSQL, Relational Database Design, Complex Query Optimization
- **DevOps & Tooling:** Docker, Git/GitHub, Postman, Automated Testing, VS Code
- **Data Processing & ML Basics:** Pandas, NumPy, Scikit-learn, Matplotlib

PROFESSIONAL EXPERIENCE

Software Engineer | Acciptra

February, 2026 - Present

- **Frontend Engineering:** Spearhead the end-to-end development of enterprise-grade web applications, leveraging React and TypeScript to engineer highly responsive, type-safe, and state-managed frontend interfaces.
- **Backend Architecture:** Architect and deploy asynchronous, high-throughput RESTful APIs utilizing Python and FastAPI, significantly optimizing backend latency and ensuring robust service reliability.
- **Database Management:** Design and normalize complex PostgreSQL database schemas, implementing optimized querying strategies to enhance data retrieval speeds and maintain strict data integrity.
- **DevOps & Containerization:** Implement containerization strategies using Docker to isolate application dependencies, streamlining deployment pipelines and establishing absolute parity across development, testing, and production environments.
- **Data Integration:** Engineer backend data processing pipelines utilizing Pandas and NumPy to handle large-scale data transformations, enabling advanced analytical features and dashboard reporting.

- **Quality Assurance:** Rigorously test, debug, and document API endpoints utilizing Postman, ensuring seamless client-server communication, secure data payloads, and system-wide fault tolerance.

ACADEMIC PROJECTS

Air Pollution Monitoring & Forecasting System | Final Year Project

- **System Design:** Engineered a hardware-integrated IoT ecosystem to capture, process, and monitor real-time air quality metrics.
- **Web Integration:** Developed a dynamic web-based dashboard utilizing Python and modern web technologies to visualize sensor data and forecast pollution trends.
- **Data Analysis:** Applied foundational machine learning algorithms and statistical analysis to sensor outputs, generating actionable environmental insights.

EDUCATION

Bachelor of Science (BSc) in Computer Science & Engineering

Green University of Bangladesh | Graduation Year: September 2023

CORE COMPETENCIES & INTERESTS

- **Engineering:** Scalable System Architecture, Asynchronous Programming, Microservices Concepts, Secure API Development.
- **Interests:** Applied Machine Learning in Distributed Systems, Foundational Generative AI & LLMs, Modern Cloud Infrastructure.
